

Course Syllabus

Health Care System Research in Low-, Middle- and High-Income Settings 7.5 Credits*, Second Cycle

Learning Outcomes

Upon completion of the course, students will be able to:

- apply and adapt evidence-based knowledge about global sexual and reproductive health that is important for health care providers and patients
- evaluate interventions within health care settings
- identify multidisciplinary approaches to manage complex challenges within health care systems
- apply and adapt relevant research programmes and methods for the evaluation of structures relating to equal rights within health care settings
- define health economic concepts.

Course Content

The course focuses on understanding multidisciplinary strategies and methods for the implementation and evaluation of evidence-based knowledge about sexual and reproductive health that is important for health care providers and patients within health care settings. The course includes health economic concepts used to develop research programmes and to evaluate equal rights within health care settings.
